Amy Cushing

Color Suspended, Power Magnified

Whether designing for corporate lobby, hospital waiting room, upscale residence, or Salisbury Cathedral, Amy Isabelle Cushing consistently pushes color and light into diverse and necessary conversations.

After almost 25 years of working in kilnformed glass, London-based Cushing is recognized for her sensitivity to site-specific color treatments, an acute attention to technical detail, and the sheer joyousness of the results.

On first seeing an image of her work, one of our marketing team exclaimed, "It just makes me want to dance!" Dancing isn't the first thing that comes to mind upon entering the lobbies of most corporate offices, but it is often exactly the feeling that is needed to warm up a spare or intimidating space. In other places such as a clinic or hospital, Cushing explains, "the artwork needs to provide comfort and an element of escapism."

Artists, interior designers, and color therapists have long understood the impact of color and light on mood. It is well known that certain colors evoke calm while others energize. The transparency of glass amplifies these effects. Glass, however, also presents unique technical challenges to the designer.

Cushing's rigorous training at Chelsea School of Art almost three decades ago immersed her in experimentation as she moved between ceramics and glass, learning the limits, potentials, and nuances of the materials. "I was always set a brief and taught to consider the environment as a whole. The synergy between the artwork and its space can sometimes be subtle and even subliminal, but it is highly likely that these connections are pre-considered and integral."

Above all, Cushing stresses the importance of detail. She finds that while "a trained eye for design is critical, handling the technical process and never missing a detail is very important."

Cushing's unusual method of creating larger atmospheric installations from tiny components demands knowledge beyond the glassworking methods of color-mixing, firing, and finishing. After material selection and fabrication, physically fitting thousands of individual pieces of multi-colored glass into their final home can literally make or break the job.

When asked about her most challenging commission, Cushing describes the mounting of a 9.8' x 2.3' (300 x 70 cm) column comprised of 616 individual pieces of glass threaded to 22 separate cables, each in excess of 49' (15 m) long. It all had to be attached—without becoming entangled—above the baptismal font in Salisbury Cathedral.

At 5'2" tall, Amy Cushing directing the installation of a cloud of potentially tangled colored light suspended from a vaulted ceiling 82' (25 meters) overhead is an inspiring image.

Color and light are power. One small woman hitting the switch is power magnified.

BULLSEYE: COLOR STORIES

Behind every Bullseye color is an origin story. Many of our colors arise from a groundswell of popular demand. Others pop into being from happy accidents or lucky guesses in our Production Department. Some grow out of bluesky conversations between various employees at the factory.

But maybe our favorite way Bullseye colors come to life is when an artist asks us for a new hue, a specific shade that will realize a one-of-a-kind vision in glass. We see this sort of collaboration as a win-win for everyone. Artists get to fill the world with radiant works. We inevitably learn a ton while formulating a new glass. And kilnformers everywhere get an expanded palette—not to mention the artist's world-class example of what can be done with it.

By pressing into their craft, artists provoke us to push the limits of glass technology. Art furthers science; science furthers art. This interchange is at the heart of Bullseye's constant pursuit of innovation. "That is one big reason Bullseye works with artists," co-owner Dan Schworer explains. "They push us to do things that we often assume aren't possible. We'd like to tell them to go away," he adds with a wink in his voice, "but, you know, they just camp out until we solve their color problem."

In other words (translating from Dan's Wisconsin farm-country wryness): Keep camping out, artists and makers. Whether you're aspiring or established, keep dreaming, keep pushing. When you do, you make everyone better. And who knows? You just might gift the future with a broader palette and brighter possibilities.

Opalescent

Light-reflecting glass styles, equally excellent for kilnwork, stained glass, and mosaic applications.

Dimensions are approximate. Opalescent sheet glass is available in double-rolled 3 mm (-0030) and Thin 2 mm (-0050). Due to the handcrafted nature of Bullseye glass, all colored sheets have at least one rolled edge. Most sheet glass styles are available in these thicknesses:

2 mm Thin (-0050)

3 mm (-0030)

Approximate color before firing. Color after a full fuse firing. A solid sample indicates no change from unfired to fired. Each sample is 8" (20 cm) wide.

Black & White

Cream
000420-0030, -0050
Like French Vanilla but without the reactivity. Fires to an even, warm-toned off-white.

French Vanilla
000137-0030, -0050, -0000
Warm with amber tones. Reacts with silver. May strike to a bright dense white. Expect variation.

Warm White
000920-0030, -0050
It's still white, just warmer!

Opaline
000403-0030, -0050 ●
Strikes to a milky white that transmits softened yet fiery light. Can have a dramatic effect as an overlay.

Lacy White
000143-0030, -0050, -0000 ●
Intended for stained glass: when fired, strikes to an even white with unpredictable density.

Translucent White
000243-0030, -0050 ●
Fires to an even white, but more translucent than White (000113). Cold sheet may have irregular white markings.

White
000113-0030, -0050, -0000
For kilnforming and stained glass. More opaque after firing, but still transmits light.

Opaque White
000013-0030, -0050
Our brightest white. Completely opaque before and after firing.

Dense White Opalescent
000313-0030, -0050 (re-release)
A neutral white well-known for its strong reactive potential.

Reactive Cloud
000009-0030, -0050
Slightly bluer and more translucent than White (000113) when fired. See reaction tips on page 67.

Black
000100-0030, -0050, -0000, -0060
A classic. This opaque and glossy black melts to a uniform surface.

Stiff Black
000101-0030, -0050
Not as soft as Black (000100), holds its shape well at blowing temperatures. May slump differently than Black.

Tekta

Flat, uniform, and available in a range of sizes. Trimmed on all sides so there's no waste. Lead-free and Bullseye Compatible. For additional Clear styles, see pages 8 & 9.

Alchemy Clear

Take your creativity to wizardly places with Bullseye’s Alchemy Clear styles. Both styles change the appearance of silver when fired in direct contact with the glass.

Expect variation in effects. Factors include sources of silver, glass production runs, and heatwork (firing times, temperatures, multiple firings, etc.). More details available in the About Our Glass section of bullseyeglass.com.

For silver foil, see page 44.

Alchemy Clear Silver to Gold
001015-0030, -0050
Upon firing, silver foil turns gold. Has a slight blue tint in cold and fired form.

Alchemy Clear Silver to Bronze
001016-0030, -0050
Upon firing, silver foil turns a rich reddish bronze. Has a slight coral tint in cold and fired form.

This style may not reveal (or strike to) its target color until fired. For more information, see page 66.

Hues of shift colors change depending on thickness and/or lighting, regardless of whether they have been fired or not.

Each glass style has specific performance characteristics. Read working notes in the About Our Glass section of bullseyeglass.com before starting any project. To anticipate potential color reactions, see page 67.

Irid & Textured

Iridescent sheets with our signature matte surface and textured styles. Most are available in both 3 mm and Thin 2 mm thicknesses. The iridescent surfaces are food safe and permanent at full fuse temperatures.

Dimensions are approximate. Due to the handcrafted nature of Bullseye glass, all colored sheets have at least one rolled edge.

Iridescent coatings may vary in appearance from edge to edge and from sheet to sheet. For example, the rainbow iridescent coating on a black sheet may appear on approximately two-thirds of the surface, while the remaining area shows only silver or gold iridescent hues.

Note: Never fire irid-side-down on ThinFire, as pitting may occur. Instead, always fire irid-side-down on a primed shelf.

Stained Glass

All of our sheet glass styles, fusible and non-fusible, work wonderfully for stained glass.

In 1974, three hippie artists started Bullseye Glass Co. in the backyard of a ramshackle house in the southeast of Portland, Oregon. Their mission? To make sheet glass in luscious colors that would serve the country's booming stained glass market.

That mission expanded in 1979 after a chance encounter with artist Klaus Moje led Bullseye's founders to accomplish the unprecedented: they developed a process for producing reliably fusible colored glass. A new medium was born. In something of a Gutenbergian revolution, it was suddenly possible for makers everywhere to begin creating with tested compatible art glass.

Over 40 years later, Bullseye is still a leader in the fused glass revolution. We're also still committed to providing an unparalleled palette for traditional and architectural glassworks. We like to think our colors and styles could launch stained glass masters from any period (even those from the 70's) into the grooviest of creative ecstasies.

Roger Thomas, *Fall as Sleet*, Op. 525, 2012. Includes Bullseye Streamer and Mardis Gras, 39" × 19" (99 × 48 cm). Photo by Bill Bachhuber.

Representing a landscape is one thing; manifesting its spirit is another. That's why when Roger Thomas paints, he paints with fused glass. Glass allows him to work with depths that do justice to his vision of nature—and maybe even the nature of vision. Through the hatching and layering techniques he developed and

teaches around the world, Thomas is able to construct scenes that move and breathe with color and light. His work provides an inspiring example of the sensory scenes waiting to be unveiled through kiln-glass.

Richard Whiteley

Color-Driven Conversation

For Richard Whiteley, color is a force. Every hue pushes. Every gradient pulls. Like distinct types of gravity, colors cause ideas to take shape around them. And through them. And because of them.

"Color is a key consideration even as my works are conceptualized," explains Whiteley. "I want colors to evoke a feeling that is reflected by the conversation with form. Color doesn't just support this conversation. It often drives it."

A glass artist since age 16, Whiteley's approach to color has become wed to dimensions of expression made possible exclusively through glass. Color, for Whiteley, is not simply the sum of hue, value, and saturation. When expressed through glass, it is also a product of translucency, opacity, and its contextual relationship to light. This sensibility, mediated through glass, allows Whiteley to explore negative space in uniquely powerful ways.

His work begins with a void. Empty potential. Conceptual space. He then uses glass to build around it—with color and form growing from the void the way leaves sprout from a branch or spirals spread from a whirlpool. In this process, the instigating space that might otherwise be overshadowed by its own outgrowths becomes highlighted by them instead. Materially, the result is an exotic object through which structure and space converse. Experientially, the result is art able to evoke moods and provoke questions available almost nowhere else. And this powerful work is made possible by colored glass.

That's why when Whiteley first approached Bullseye with the need for a new color, we took his request very seriously. Through discussions with our Sales Department it soon became clear that he was asking for something more than a particular hue or tint. The emotional tones of his vision required a layered gray and a complementary spectrum to go with it. So after reviewing Bullseye's palette with Whiteley, we selected Gray Tint (1829) as an appropriate starting reference. We then prepared samples with varying degrees of relative saturation. From those samples, Whiteley chose a palette that featured grays with half and a third of 1829's saturation. This array of grays, we all hoped, would allow him to realize his compelling creative vision.

And oh, it did. Since then, Whiteley's creations have featured in dozens of exhibitions around the world. They can also be found in major collections at places like The Corning Museum of Glass, The Australian National Gallery, and the Palm Springs Art Museum. Whiteley himself has gone from Head of the Glass Workshop and Foundation Studies at the Australian National University's School of Art & Design, to Senior Program Manager at The Studio at The Corning Museum of Glass. He has also helped develop several additional Bullseye hues. In short, we could not be more proud to formulate the colors that help drive Richard Whiteley's art.

Why Choose Bullseye for Casting?

Bullseye billets are an excellent alternative to lead crystal. Our billets are safer, more economical, and significantly lighter—full lead crystal can weigh as much as 45% more. For more uniform color, use billets from the same production date. Our billets are also compatible with our complete line of sheet glass, frit, and powder.

What Are Shift Styles?

The hues of these styles change depending on thickness and/or lighting, regardless of whether they have been fired or not. Expect the color to slightly shift and/or darken when firing to full fuse at casting temperatures. This subtle change, compared to the unfired glass, will be more apparent in thicker sections. Although this is also true with other forms of these styles, it is most noticeable when making the thicker works for which billets were developed.

Mel Douglas

Finding Nature (and Color) Between the Lines

Natural glass is a term that usually refers to serendipitous specimens left by lightning strikes, volcanoes, and meteorites. But spend any time with the work of Australian artist Mel Douglas and that custom of excluding ourselves from what is considered natural can begin to seem oddly artificial. Her work somehow situates us in nature anew. It reminds us that all glass is natural glass.

By inscribing the surface of her pieces with painstaking, handmade hatching, Douglas marks them as intimately human. And yet by retaining elemental purity of form, linework, and color, she endows them with the elegance of raw physics. The implications of this fusion are transformative. Our kilns, hands, and minds suddenly assume a familial resemblance to the unseen energies that stir galaxies and form worlds. In Douglas's work, the simple becomes singular, the local becomes illuminating.

As a Bullseye Artist in Residence, Mel Douglas brought her illuminating practices to Portland in 2016. The main question she wanted to explore with us was how surface and form can be built from a repetitious single line. But while pulling a temporary formulation of Black Opalescent (0100) into ultra-thin stringer from a Vitrigraph kiln, she noticed something unexpected: the thinner 0100 got, the bluer it looked. For that version of 0100, the distance between thin and very thin was all that separated black from blue.

It was a simple discovery, but it illustrated a crucial principle: our glass (and our world) is as colorful as our questions. This is because the quality of our questions shape the depth of our explorations, and that depth, in turn, determines the limits of creative possibility available to us.

When Mel Douglas creates, then, it's almost certain that a primal interview is underway. *What is light? What is color? What are lines, surfaces, fields, and voids? How do these things relate?* By learning from Douglas's work and practices, it is possible to engage with glass on more intimate levels. That might mean discovering a new quirk of color and adding it to the log of knowledge stored in About Our Glass at bullseyeglass.com. It might mean innovating novel processes for making. But regardless of specifics, it will mean nothing less than participation in the strange exchange between a mysterious state of matter known as glass and a creative force of nature known as humanity.

John Kenneth Clark

A First Fusing Project

For most of us, our first fusing project was a cabochon, a light catcher, or a coaster. For renowned architectural glass designer John Kenneth Clark, it was the equivalent of a cathedral window.

When the Louis Vuitton Group needed an artist to create a window for the cathedral-like stillroom at the Glenmorangie Distillery, they commissioned Clark to fashion in glass the signet that defines their world-famous whisky brand.

But that would be no easy task. The Scottish distillery had long used the eighth-century AD Cadboll Stone as their brand emblem, and reproducing the intricate patterns of the relief-sculpted Pictish stone begged for craftsmanship equal to the original's remarkable stonework. Clark accepted the challenge.

"I first created a slumped panel using clear glass," Clark explains. "Then they wanted color." The clients' wish for a stronger color focus eventually led Clark to a material he'd not used before: Bullseye Glass. Due to the size of the project, Clark gathered all the 1137 amber sheet he could find from various German suppliers. Unaware of the slight variations between different runs of this handcast sheet, he fired together a number of pieces to create a base of the requisite size.

Just before the clients arrived to inspect fabrication, Clark opened the kiln and found—to his horror—what he called a "chessboard" of varying amber shades. "We quickly closed the kiln and I told the clients it was too hot to open... That's when I figured out the frit method of creating flashed glass."

Above: John Kenneth Clark, *Stillhouse - Glenmorangie*, 2010. Fused and kilncarved Bullseye sheet and frit, 89" x 87" (2.25 x 2.2 m). At left: John Kenneth Clark with his work, *Pipes in Stripes*, 2019.

Clark also figured out how to blend 1137, 1837, 1322, and 1101 frits into a palette of fusible colors able to fill the channels in his carved plaster and mimic the shades of the distillery's renowned whiskies. The project was a success.

Few of us did not struggle with our first fusing projects. The mark of a master is turning those struggles into art.

Stringer

Threads of glass pulled from re-melted Bullseye Compatible sheet. Available in 2 mm, 1 mm, and Fine Line (0.5 mm). For kilnforming and torchworking. 

Stringer are approximately 17.75" (451 mm) long, packed in clear plastic tubes 18" (457 mm) long and 0.75" (19 mm) in diameter.

Tubes are packaged by volume. A tube of 0.5 mm stringer contains approximately 275 pieces. A tube of 1 mm stringer contains approximately 123 pieces. A tube of 2 mm stringer contains approximately 50 pieces. (To reduce unit prices, tubes of gold-bearing glasses contain fewer stringer and are marked here with an asterisk *.) All styles of stringer are available in bulk quantities of ten pounds (4.5 kg) per box.

Rods

For your work at torch or kiln, drawn from Bullseye Compatible glass. 

Bullseye rods are graded as either F (recommended for both kilnwork and torchwork) or T (recommended for torchwork only). Since all Bullseye rods are recommended for torchwork, the F and T grades are relevant only to kilnworkers. On these pages, T grade rods are marked with an asterisk (*). Unmarked rods are F grade.

Rods may be purchased as singles, by the pound, or in five pound quantities. (Approximately eighteen to twenty rods per pound; fourteen per pound for lustres.)

Murrine

This *murrine* (singular *murrina*) is made with Bullseye Compatible glass.

Use it to add details to kiln-glass projects, or for making jewelry components. Several assortments are available. To see the complete selection, visit shop.bullseyeglass.com.

Glass Packs

Maximum variety at minimal expense.
For outfitting a class or expanding your own palette.

Class Pack

A colorful assortment of Bullseye Compatible transparent, opal, irid, and clear glasses, individually marked for easy reference. May include some fusible Curious styles. Approximately 45 pieces of 10" x 10" (25 x 25 cm); or 38 pieces measuring 5" x 10" (13 x 25 cm) plus 25 pieces of 10" x 10" (25 x 25 cm). About 45 lb (20.4 kg)/30 sq ft (2.78 m²) of glass.
8359 \$625.50

One-of-Each Rod Pack

Ideal for designer prototyping. One rod of nearly every standard style we make, as listed in our catalog. About 100 rods in all, including lustres and 8 mm Clear, but no SizzleStix. (Substitutions may be included.) Each rod is labeled with its style number.
8503 \$266.70

Tekta Pack

A selection of 10" x 10" (25 x 25 cm) pieces of Tekta Clear in a variety of thicknesses: 30 pieces of 3 mm, 8 pieces of 4 mm, and 4 pieces of 6 mm. Trimmed on all sides, uniform and lead free. About 45 lb (20.4 kg)/30 sq ft (2.78 m²) of glass.
8356 \$553.40

Hot Rods Starter Pack

Great for teachers. A 5-pound assortment of opalescent and transparent rods in 17" (432 mm) lengths, and two dichroic SizzleStix in 3 mm and 6 mm widths and 15–16" lengths (381–406 mm). Does not include lustres. Style numbers not labeled.
8507 \$197.15

Clear Squares, 6 mm 0.75" (1.9 cm)

Stack these handy pre-cut squares on patterned or colored sheet glass and let them flow to create beautiful round cabochons. (See *Quick Tip: Circles from Squares* at bullseyeglass.com.) Also great for creating lens effects on sheet glass projects. Container holds approximately 40 0.75" (1.9 cm) squares of 6 mm Tekta Clear. 0.46 lb (0.21 kg).
8777 \$13.00

Painting with Glass Pack

Eight 5 oz (14 g) jars of colored powders; one 1 lb (0.45 kg) jar of black powder; three jars of clear frit in Fine, Medium, and Coarse grains; and an assortment of colored stringer, four stencils, two powder sifters, a frit sifter, sgraffito tool, GlasTac Gel, and TipSheet 4: *Designing Your Own Art Glass*. (Sheet glass sold separately.)

8368 12" (305 mm) circles. 20 discs. \$504.75

Sample Sets

When you need to see our glass in your own light. Selected for visual reference. Samples are not graded Bullseye Compatible.

While Bullseye is known for consistent color, the glass we produce is handmade. Slight variations from run to run are normal and expected.

Samples are selected to represent our middle range of surface color, texture, and transmitted light. Glass you order based on these samples may vary slightly. For glass styles that change appearance with heatwork, we choose samples as close as possible to the color achieved after a full fuse. Fired color may vary depending on the firing cycles and kiln you use. This is especially true for “striking” glasses.

Modular Kilnforming Sample Sets

Our modular kilnforming sample sets are designed to provide small groups of samples that meet users' specific needs, at lower prices than are possible with our Master Kilnforming Sample Set. Individual samples measure 2" x 2" (51 x 51 mm).

Kilnwork Tools & Supplies

Bullseye GlasTac

Lightly tacks glass pieces in place prior to firing. Slow-drying and pliable, it allows readjustments as you work. Organic colorant lets you see where you've put it on clear glass, but it burns out in the kiln. Use sparingly. Water soluble.

- 8234** 4 fl oz (0.12 L) applicator bottle \$8.50 
8232 32 fl oz (0.95 L) bottle \$35.50 

Bullseye GlasTac Gel

This thicker version of our regular GlasTac has a "tackier" feel but still burns out cleanly. It holds its applied shape well and stays sticky longer (more working time before it dries). Tacks sheet to sheet so you can move projects sooner. Great for children's projects. Use sparingly. Water soluble.

- 8268** 4 fl oz (0.12 L) applicator bottle \$9.00 
8269 32 fl oz (0.95 L) bottle \$45.00 

Underglaze Black Lead-Free Pencil

Make your mark on glass. Use these ceramic underglaze decorating pencils to sign your name or add other handwritten text, draw on one or more layers, or create shading effects.

- 7268** \$13.25

Sepp Copper Leaf Booklet

Add decorative elements to your fused works. Sepp Copper Leaf, 25 sheets, 5.5" x 5.5" (14 x 14 cm) each, 100% copper, 1.0 micron thick.

Molds

From Creative Ceramics in Europe, the finest commercial slumping molds on the market. Slipcast from a specially formulated clay body, these molds have an exceptionally smooth surface, accept primer uniformly, and do not crack under repeated use if handled properly. 

Note: The measurements given here are for the **approximate outer dimensions** of the mold. This is to help you determine whether a given mold will fit in your kiln. Since they are handmade, individual molds will vary in size. **Never cut glass to fit until you have measured your mold.** See Suggested Slumping Schedules at bullseyeglass.com. Includes schedules for more than 100 molds.

Casting Molds from Colour de Verre

Reusable ceramic molds for kilncasting with frit.

Use these molds to kilncast natural forms—a variety of leaves, snowflakes, and feathers. (Some include both casting and slumping surfaces in one mold.) Other more functional design options include boxes with lids, beads, and even a sushi platter that can be made from a single billet of Bullseye Glass! See over twenty Colour de Verre mold styles at shop.bullseyeglass.com/tools-supplies/casting-molds.html.

Because these casting molds are handmade, slight variations in size are to be expected. Colour de Verre is located in Portland, Oregon, and all the molds are produced in the Pacific Northwest. Here are examples of a few of the many Colour de Verre Molds carried by Bullseye Glass. See more at shop.bullseyeglass.com.

8249

Bullseye Vermiculite Board

A high-density vermiculite board that can withstand temperatures up to 2012 °F (1100 °C). This board is stronger than most fiberboard and can be cut and tooled just like wood. Not recommended for use as a kiln shelf. While it is certified asbestos-free, always use a NIOSH-approved respirator when cutting or creating dust. Before using with glass, prefire to 1580 °F (860 °C) for 30 minutes and crash cool. Est. weight: 19 lb (8.6 kg). 1" x 24" x 36" (2.5 x 61 x 91.4 cm).

Bullseye Shelf Primer

Bullseye's popular pink formula. Each batch is kiln-tested to ensure consistency from run to run. Illustrated instructions discuss application, drying, mixing, precautions, and storage. One 5 lb bucket will coat about 150 shelves each measuring 20" sq (129 cm²).

- 8220** 5 lb (2.27 kg) \$37.00 
8222 40 lb (18.14 kg) \$200.00 

Triangular Kiln Posts

The less surface area of post in contact with your shelf, the more uniform the shelf temperature. That's why we like these triangular posts. Stable enough to stack.

- 8888** 1" (2.5 cm) \$2.05
8889 2" (5.1 cm) \$2.50
8980 6" (15.2 cm) \$7.00

Hake Brush

This soft 4.5" wide (11.4 cm) brush is one of the best tools for applying shelf primer quickly and easily to your mold or kiln shelf.

- 7014** \$15.75

Fiber Paper

A kiln studio standard. As a shelf separator, it helps prevent bubbles between the shelf and the glass. As a perimeter dam, it insulates against thermal shock and improves annealing. Cut and construct with it for bas relief design. We use and handle only quality Lytherm paper because we like its tight weave and durability.

Vitrigraph Conversion Supplies
To turn your Caldera into a Vitrigraph kiln, just add a pot*, four supports, and a vermiculite board with a center hole. Then get busy hand pulling your own cane and stringer for kilnforming or drawing and painting with glass.

To learn how to use the Vitrigraph kiln to hand-pull your own stringer, see *TechNotes 2: The Vitrigraph Kiln* at bullseyeglass.com and our online video kilnforming lessons at videos.bullseyeglass.com.

(A) Vitrigraph Pot Supports (set of 4)
They allow hot air to circulate beneath the pot while glass flows through it. (Pot not included*) Each measures 1.5" x 2.75" x 0.5" (3.8 x 7 x 1.3 cm). **8829 \$15.25**

(B) Vitrigraph Base Board
A piece of vermiculite board sized to replace the Caldera base. (Pot not included*) Measures 1" x 11.5" x 11.5" (2.5 x 29.2 x 29.2 cm). Features a 2.5" (6.4 cm) central hole through which glass can flow. **8827 \$22.00**

Deborah Horrell

Inspired by twelve years of making and thinking with glass, this monograph documents the progression in Horrell's work as she explores translucence and opacity, solidity and fragility. Features beautifully detailed photos of work from 2000-2012 and essays by curators Bruce Guenther and Linda Tesner. 2012, hardcover, 40 pages, color.
7127 \$30.00

Klaus Moje

This thirty-year Moje retrospective traces the progression of the master's work—from early carved crystal, to layered patterned vessels, to multi-panel pieces—and his unparalleled contributions to expression and technique. Essays by Dan Klein and Bruce Guenther. Technical perspective on the Portland Panels by Ted Sawyer. 2008, soft cover, 100 pages, color.

Giles Bettison: Pattern & Perception

By Margot Osborne. This lavishly illustrated monograph on the glass artwork of Australian artist Giles Bettison draws out "his underlying aesthetic philosophy and trace(s) the evolution of his use of murrine glass over the past two decades." 2015, hard cover, 160 pages color.
7125 \$35.70

Klaus Moje: Glass

By Megan Bottari. A rare volume devoted to the life and career of Klaus Moje, a founding father of the contemporary kiln-glass movement. Follows the artist through his pioneering work on three continents over 50 years. Many color plates and personal anecdotes by artists, curators, dealers, and collectors. 2006, soft cover, 144 pages, color.
7113 \$40.00

Judy Tuwaletstiwa: Glass

Presents the story of artist Judy Tuwaletstiwa's discoveries and explorations in glass from 2012 to 2016, informed by her work over the past 45 years in fiber, paint, and writing. The highly personal combination of text and images bridges fine art and craft, technology and nature, the conceptual and the material. Each copy is unique: the cover includes a hand tipped-on original piece of glass created by the artist. Includes essays by Tina Oldknow, Lani McGregor, Ivy Ross, Diana Gaston, and Mary Kavanagh. 2016, hardcover, 212 pages.

What to Expect from Bullseye Glass

Color Consistency

While Bullseye strives for consistent colors, our glass is a handmade product and colors may vary slightly between production runs (and from images in this catalog). Some colors may change slightly upon repeated firing or with extensive heatwork. We recommend that you test samples of glass using the same firing cycles and processes to be used in finished pieces. Bullseye glasses are formulated for fired color. Unfired glass color may vary.

To learn more about performance characteristics of specific glasses, visit the *About Our Glass* section at bullseyeglass.com. See also *TechNotes 3: Compatibility of Glasses*.

Colors That Strike

Bullseye produces many glasses that appear pale or even colorless in their cold form but “strike” or mature to a target color when fired to the right temperature. These styles are marked with a .

- **Kilnformers:** When choosing a style, focus on the fired sheet color. Like ceramic glazes, the color will emerge after sufficient heatwork.
- **Stained glass and mosaic makers:** Be aware of strikers. Use only if you’re willing to pre-fire the glass before use, or select it in person. The unfired sheet colors for strikers vary widely.

Examples of strikers at various process temperatures

Sample key illustrations indicate which styles differ from color to struck form. Keep in mind that struck color may vary depending on temperature, atmosphere, and amount of heatwork. For example, failing to hold Ruby Red Tint (001824-0030-F) for an adequate

time during the pre-rapid heat stage of a firing cycle can prevent the glass from striking correctly. This results in a blue-brown cast (or saphirine effect) instead of a true ruby red color. See our *QuickTip: Gold-bearing Pink Tints* for more information.

Compatibility

Bullseye glasses are well known for reliable compatibility. But it's important to understand the conditions of our factory testing, especially if you intend to fire glass under unusual conditions.

At Bullseye, we test glasses known to be fairly stable by firing them to a temperature of 1500 °F (815 °C) and then holding for 15 minutes before annealing. Once cooled, these tests are viewed for stress through a polarized light filter and graded accordingly. We fire glasses known to be less stable three times to make sure they'll perform well under multiple firing conditions, such as those used to fuse and slump a plate.

If you are using a heat process that involves an extra-high temperature or an unusually long firing time, we recommend that you test the glass yourself, under conditions specific to your project. For example, if you want to include flameworked elements in a kilnformed project, remember that flamework takes glass to temperatures exceeding the compatibility tests we do at the factory and that some glasses are more sensitive to extensive work in the flame. Therefore, it will be important not to overwork your glass during flameworking and to test the flameworked components for compatibility using the full range of kilnforming processes planned for the finished project.

Also note: some processes that may not appear to exceed the parameters of the compatibility test actually do exceed it. For example, holding some glasses for long times at temperatures around 1400 °F (760 °C), which is in the devitrification range, can cause the glass to change dramatically.

Many artists (the late Klaus Moje, for example) are able to push Bullseye glass to high temperatures for long times with exceptionally good results, but their success is ensured by testing. No manufacturer can guarantee glass to perform as expected under all imaginable working conditions. Testing is a wise practice with whatever glass you use.

“Champagne” bubbles are a normal feature of kiln-glass. See *TechNotes 5: Volume & Bubble Control* at bullseyeglass.com.

Get a Reaction

When some styles of Bullseye glass are combined in the kiln, their chemistries have the potential to react, producing special effects that range from subtle to dramatic.

Grade Codes

Glass is assigned one of six grades.

F: Often called “Fusible,” a glass that has passed factory testing for color and compatibility in kilnwork. Also called “Tested Compatible” or “Bullseye Compatible.” Recommended for kilnwork, flamework, stained glass, or mosaic. (Stained glass and mosaic makers, see note on page 66 regarding strikers.)

P: First-quality non-fusible glasses are called “Standard Production.” Not recommended for kilnwork but good for stained glass or mosaic.

B: Fusible-curious glasses. Compatible, but fired color or appearance may not fall within the accepted color range or may have minor flaws. Sometimes called “Furious.” Discounted. Recommended for kilnwork, flamework, stained glass, or mosaic. (Stained glass and mosaic makers, see note on page 66 regarding strikers.)

C: Non-fusible, non-standard glasses are graded and marked “Curious.” These may not fall within the accepted color range or may have minor flaws. Discounted. Not recommended for kilnwork but good for stained glass or mosaic.

F Rod: Recommended for both kilnwork and torchwork.

T Rod: Recommended for torchwork only.

Notes & Restrictions

Prices listed are retail. Sheet glass is sold by the piece. Some listed sheet glass dimensions are approximate, due to the handcrafted nature of the product. Discounts apply to single orders only, not a combination of orders. Your order can include any combination of items (glass, tools, etc.) to qualify for a greater discount, but the discount will only be applied to qualifying items. Prices subject to change without notice.

Understanding Color on These Pages

Colors representing fusible glasses approximate how glasses will appear after firing. Cold sheet colors will vary.

(For email orders, please provide your name and daytime phone number so we can call to confirm availability and prices.)

To Locate a Bullseye Dealer

Contact our Sales Department at: sales@bullseyeglass.com or 503.232.8887.

Search under Find Our Glass in the Products section of bullseyeglass.com.

Packing

We have boxes especially designed for shipping sheet glass in most Bullseye sizes.

Box fees:

- 10 x 10s = \$10.00 (box can hold 1-40 3 mm sheets)
- Half sheets = \$18.00 (box can hold eight 3 mm sheets)
- Full sheets = \$60.00 (box can hold eight 3 mm sheets—return the box for a \$50.00 credit)

Large-quantity sheet glass orders are packed into sturdy wooden crates, then banded together or palletized for safe transport. For orders of more than 20 sheets, contact the Sales Department at sales@bullseyeglass.com or 503.232.8887.

Shipping

Unless otherwise instructed, we ship via UPS Ground. Most orders ship within 24–48 hours of receipt. We must have a street address for UPS delivery. (No P.O. boxes.)

Returns

Contact us for authorization and instructions. A credit will be issued for merchandise returned in new condition within 30 days of purchase. Restocking fees may apply.

Prices

Bullseye offers a generous volume discount structure—see page 70. To learn about wholesale pricing, please call or email our Sales Department. Prices are subject to change without notice.

Gift Cards
